Blood Bank

The project entitled "Blood Bank" is used to minimalize the effort of managing donator data and availability of collected blood. Blood bank provides an online form which helps the admin to find suitable blood from the donator. Hospitals can register on this webapp to donate and request blood if required. Hospitals can collect blood and update the blood stock available. Admin verifies the updated blood stock from the hospitals and updates it on the webapp.

Modules:

- Admin:
    - Approve or reject donors
    - View new donors
